Specifically, the toxicity of the present sequence towards blabrotica virgifera virgifera was tested. The EC50 value (concentration at which 50% feeding inhibition is observed) of the present protein was found to be >243 microgram per millilitre, compared to 2.42 microgram per millilitre for the wild type CryIIIA protein. This mutant protein is recognised as a "down mutant" for Diabrotica virgifera virgifera. The toxicity of the mutant protein for this Diabrotica pest was significantly below the toxicity of the native CryIIIA protein. note: this sequence does not appear in the specification; it was created using information appear in the specification; it was created
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel CryIIIA proteins AAW34811-41 were produced by alanine scanning mutagenesis of domain II of the CryIIIA protein of Bacillus thuriengensis. All the positions changed to alanine in these proteins are located in some of the solvent exposed loops and beta-strands directed towards or located at the molecular apex. The substituted amino acids have a relative solvent accessibility of at least 40%, or are a maximum distance of 3 amino acids away from an amino acid having at least 40% relative solvent accessibility. The novel CryIIIA proteins have an increased toxicity to Coleopteran insects, e.g. Colorado potato beetle, and can be seed to coleopteran insects, e.g. Colorado potato beetle,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                          Novel CryIIIA proteins AAW34811-41 were produced by alanine scanning mutagenesis of domain II of the CryIIIA protein of Bacillus thuriengensis. All the positions changed to alanine in these proteins are located in some of the solvent exposed loops and beta-strands directed towards or located at the molecular apex. The substituted amino acids have a relative solvent accessibility of at least 40%, or are a maximum distance of 3 amino acids away from an amino acid having at least 40% relative solvent accessibility. The novel CryIIIA proteins have an increased toxicity to Coleopteran insects, e.g. Colorado potato beetle, and can be used to combat, or improve plant resistance towards insects. Specifically, the toxicity of the present sequence towards Diabrotica virgifera was tested. The ECSO value (concentration at which 50% feeding inhibition is observed) of the present protein was found to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Diabrotica virgifera virgifera.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             increased toxicity; Coleopteran insect; Colorado relative solvent accessibility; plant resistance;

CC thuriengensis of domain II of the CryIIIA protein of Bacillus
CC thuriengensis. All the positions changed to alanine in these proteins
CC are located in some of the solvent exposed loops and beta-strands
CC directed towards or located at the molecular apex. The substituted amino
CC acids have a relative solvent accessibility of at least 40%, or are a
CC maximum distance of 3 amino acids away from an amino acid having at least
CC increased toxicity to Coleopteran insects, e.g. Colorado potato beetle,
CC increased toxicity to Coleopteran insects, e.g. Colorado potato beetle,
CC and can be used to combat, or improve plant resistance towards insects.
CC Specifically, the toxicity of the present sequence towards Diabrotica
CC virgifera virgifera was tested. The EC50 value (concentration at which
CC 50% feeding inhibition is observed) of the present protein was found to
CC to the for the wild type CryIIIA protein.
CC millilitre for the wild type CryIIIA protein.
CC conte: this sequence does not appear in the specification; it was created
                                                                                                                                                                                                                                                                                                                                                                                                          Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cryIIIA gene; corn rootworm toxicity; CryIIIA protein; increased toxicity; Coleopteran insect; Colorado potato beetle; relative solvent accessibility; plant resistance; biabrotica virgifera virgifera.
Novel CryIIIA proteins AAW34811-41 were produced by alanine scanning mutagenesis of domain II of the CryIIIA protein of Bacillus thuriengensis. All the positions changed to alanine in these proteins are located in some of the solvent exposed loops and beta-strands directed towards or located at the molecular apex. The substituted amino acids have a relative solvent accessibility of at least 40%, or are a maximum distance of 3 amino acids away from an amino acid having at least 40% relative solvent accessibility. The novel CryIIIA proteins have an increased toxicity to Coleopteran insects, e.g. Colorado potato beetle,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAW34824 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        US5659123-A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       and can be used to combat, or improve plant resistance towards insects. Specifically, the toxicity of the present sequence towards Diabrotica virgifera virgifera was tested. The EC50 value (concentration at which 50% feeding inhibition is observed) of the present protein was found to be 7.80 microgram per millilititre, compared to 2.40 microgram per millilitre for the wild type CryIIIA protein. note: this sequence does not appear in the specification; it was create note:

                                                                                                                                                                                                                                                                                                                                                                                                                        cc thuriengensis. All the positions changed to alanine in these proteins call and the control of the solvent exposed loops and beta-strands colored in some of the solvent exposed loops and beta-strands colored colored towards or located at the molecular apex. The substituted amino acids have a relative solvent accessibility of at least 40%, or are a comaximum distance of amino acids away from an amino acid having at least colored towards to colored the colored towards insects. The colored term insects, e.g. Colorado potato beetle, and can be used to combat, or improve plant resistance towards insects. Specifically, the toxicity of the present sequence towards Diabrotica virgifera virgifera was tested. The EC50 value (concentration at which to the colored potato is observed) of the present protein was found to be 7.80 microgram per millilitre, compared to 2.40 microgram per millilitre, compared to 2.40 microgram per content the wild type CryIIIA protein.

Content this sequence does not appear in the specification; it was created was ing information provided.

```

Novel CryIIIA proteins AAW34811-41 were produced by alanine scanning mutagenesis of domain II of the CryIIIA protein of Bacillus thuriengensis. All the positions changed to alanine in these proteins are located in some of the solvent exposed loops and beta-strands

solvent exposed loops and beta-strands

The substituted amino acids have a relative solvent accessibility of at least 40%, or are a maximum distance of 3 amino acids away from an amino acid having at least 40% relative solvent accessibility. The novel CryIIIA proteins have an increased toxicity to Coleopteran insects, e.g. Colorado potato beetle, and can be used to combat, or improve plant resistance towards insects. Specifically, the toxicity of the present sequence towards Diabrotica virgifera was tested. The EC50 value (concentration at which 50% feeding inhibition is observed) of the present protein was found to be 1.32 microgram per millilitre, compared to 2.88 microgram per millilitre for the wild type CryIIIA protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence

                                                                                                                                                                                                                                                                                                                                                                             CC mutagenesis of domain II of the CryIIIA protein of Bacillus

thuriengensis of domain II of the CryIIIA protein of Bacillus

ct thuriengensis. All the positions changed to alanine in these proteins

cc thuriengensis. All the positions changed to alanine in these proteins

cc are located in some of the solvent exposed loops and beta-strands

cd are located towards or located at the molecular apex. The substituted amino

cc acids have a relative solvent accessibility of at least 40%, or are a

cc maximum distance of 3 amino acids away from an amino acid having at least

cc 40% relative solvent accessibility. The novel CryIIIA proteins have an

cc increased toxicity to Coleopteran insects, e.g. Colorado potato beetle,

cc and can be used to combat, or improve plant resistance towards insects.

cc Specifically, the toxicity of the present sequence towards Diabrotica

cutingifera virgifera was tested. The ECSO value (concentration at which

cc 10% feeding inhibition is observed) of the present protein was found to

cc be 0.78 microgram per millilitre, compared to 2.88 microgram per

cc note: this sequence does not annear in the specification: it was created

All the positions changed to alanine in these proteins CC are located in some of the solvent exposed loops and beta-strands CC directed towards or located at the molecular apex. The substituted amino CC acids have a relative solvent accessibility of at least 40%, or are a CC maximum distance of 3 amino acids away from an amino acid having at least CC 40% relative solvent accessibility. The novel CryIIIA proteins have an CC increased toxicity to Coleopteran insects, e.g. Colorado potato beetle, CC and can be used to combat, or improve plant resistance towards insects. CC Specifically, the toxicity of the present sequence towards insects. CC virgifera virgifera was tested. The EC50 value (concentration at which CC virgifera virgifera was tested. The EC50 value (concentration at which CC be 11.52 microgram per millilitre, compared to 4.04 microgram per CC mote: this sequence does not appear in the specification; it was created concentration at the concentration at 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

                                                                                                                                                                                                                      CC Novel CryIIIA proteins AAW34811-41 were produced by alanine scanning CC mutagenesis of domain II of the CryIIIA protein of Bacillus CC thuriengensis. All the positions changed to alanine in these proteins CC are located in some of the solvent exposed loops and beta-strands CC directed towards or located at the molecular apex. The substituted amino CC acids have a relative solvent accessibility of at least 40%, or are a CC maximum distance of 3 amino acids away from an amino acid having at least CC 40% relative solvent accessibility. The novel CryIIIA proteins have an CC increased toxicity to Coleopteran insects, e.g. Colorado potato beetle, CC and can be used to combat, or improve plant resistance towards insects. CC Specifically, the toxicity of the present sequence towards Diabrotica CC virgifera virgifera was tested. The ECSO value (concentration at which CC 50% feeding inhibition is observed) of the present protein was found to be 7.12 microgram per millilitre, compared to 4.04 microgram per CC note: this sequence does not appear in the specification; it was created on the provided concentration at the forms of the previous of the present protein was found to content this sequence does not appear in the specification; it was created content to informs the convision.

All the positions changed to alanine in these proteins are located in some of the solvent exposed loops and beta-strands directed towards or located at the molecular apex. The substituted amino acids have a relative solvent accessibility of at least 40%, or are a maximum distance of 3 amino acids away from an amino acid having at least 40% relative solvent accessibility. The novel CryIIIA proteins have an increased toxicity to Coleopteran insects, e.g. Colorado potato beetle, and the solvent accessibility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             and can be used to combat, or improve plant resistance towards insects. Specifically, the toxicity of the present sequence towards Diabrotica virgifera was tested. The present sequence (concentration at which 50% feeding inhibition is observed) of the present protein was found to be 0.30 microgram per millilitre, compared to 1.39 microgram per millilitre, compared to 1.39 microgram per millilitre for the wild type CryIIIA protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Modified Bacillus thuringiensis CryIII proteins - with increased toxicity against insect pests, particularly Coleopteran insects, e.g. corn rootworm and Colorado potato beetle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence

                          Q
                                                                                                                                                                                                                                                                                                       CC mutagenesis of domain II of the CryIIIA protein of Bacillus
Ct thuriengensis. All the positions changed to alanine in these proteins
Ct thuriengensis. All the positions changed to alanine in these proteins
Ct are located in some of the solvent exposed loops and beta-strands
Ct directed towards or located at the molecular apax. The substituted amino
Ct acids have a relative solvent accessibility of at least 40%, or are a
Ct maximum distance of 3 amino acids away from an amino acid having at least
Ct 40% relative solvent accessibility. The novel CryIIIA proteins have an
Ct increased toxicity to Coleopteran insects, e.g. Colorado potato beetle,
Ct and can be used to combat, or improve plant resistance towards insects.
Ct Specifically, the toxicity of the present sequence towards Diabrotica
Ct virgifera virgifera was tested. The ECSO value (concentration at which
Ct 50% feeding inhibition is observed) of the present protein was found to
Ct be 0.33 microgram per millilitre, compared to 1.39 microgram per
Ct millilitre for the wild type CryIIIA protein.
Ct note: this sequence does not appear in the specification; it was created
                                                                                         Query Match

Novel CryIIIA proteins AAW34811-41 were produced by alanine scanning mutagenesis of domain II of the CryIIIA protein of Bacillus thuriengensis. All the positions changed to alanine in these proteins are located in some of the solvent exposed loops and beta-strands directed towards or located at the molecular apex. The substituted amino acids have a relative solvent accessibility of at least 40%, or are a maximum distance of 3 amino acids away from an amino acid having at least 40% relative solvent accessibility. The novel CryIIIA proteins have an increased toxicity to Colepteran insects, e.g. Colorado potato beetle, and can be acided to combat of the proteins have an increased toxicity to Colepteran insects, e.g. Colorado potato beetle, and can be acided to combat of the proteins have an increased toxicity to Colepteran insects, e.g. Colorado potato beetle, and can be acided to combat of the proteins have an increased toxicity to Colepteran insects, e.g. Colorado potato beetle, and can be acided to combat of the proteins have an increased toxicity to Colepteran insects.
                                                                              and can be used to combat, or improve plant resistance towards insects. Specifically, the toxicity of the present sequence towards Diabrotica virgifera virgifera was tested. The ECSO value (concentration at which 50% feeding inhibition is observed) of the present protein was found to be 4.29 microgram per millilitre, compared to 3.08 microgram per millilitre for the wild type CryIIIA protein.

note: this sequence does not appear in the specification; it was created

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                              Novel CryIIIA proteins AAW34811-41 were produced by alanine scanning CC mutagenesis of domain II of the CryIIIA protein of Bacillus thuriengensis. All the positions changed to alanine in these proteins CC are located in some of the solvent exposed loops and beta-strands CC directed towards or located at the molecular apex. The substituted amino CC acids have a relative solvent accessibility of at least 40%, or are a CC maximum distance of 3 amino acids away from an amino acid having at least 10% relative solvent accessibility. The novel CryIIIA proteins have an increased toxicity to Coleopteran insects, e.g. Colorado potato beetle, CC and can be used to combat, or improve plant resistance towards insects. Specifically, the toxicity of the present sequence towards insects. CC virgifera virgifera was tested. The EC50 value (concentration at which CC virgifera virgifera was tested. The EC50 value (concentration at which CC is feeding inhibition is observed) of the present protein was found to be 12.47 microgram per millilitre, compared to 3.08 microgram per CC included as a "down mutant" for Diabrotica virgifera virgifera. The CC recognised as a "down mutant" for Diabrotica virgifera virgifera. The CC interesting the mutant protein for this Diabrotica pest was created CC information provided.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       thurlengensis. All the positions changed to alanine in these proteins are located in some of the solvent exposed loops and beta-strands directed towards or located at the molecular apex. The substituted amino acids have a relative solvent accessibility of at least 40%, or are a maximum distance of 3 amino acids away from an amino acid having at least 40% relative solvent accessibility. The novel CryIIIA proteins have an increased toxicity to Coleopteran insects, e.g. Colorado potato beetle, and can be used to combat, or improve plant resistance towards insects. Specifically, the toxicity of the present sequence towards Diabrotica virgifera was tested. The EC50 value (concentration at which 50% feeding inhibition is observed) of the present protein was found to be 0.39 microgram per millilitre, compared to 0.71 microgram per mote: this sequence does not appear in the specification; it was created
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Modified Bacillus thuringiensis CryIII proteins - with increased
toxicity against insect pests, particularly Coleopteran insects,
e.g. corn rootworm and Colorado potato beetle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Jansens S,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
CC mutagenesis of domain II of the CryIIIA protein of Bacillus
CC thuriengensis. All the positions changed to alanine in these proteins
CC are located in some of the solvent exposed loops and beta-strands
CC are located in some of the solvent exposed loops and beta-strands
CC acids have a relative solvent accessibility of at least 40%, or are a
CC maximum distance of 3 maino acids away from an amino acid having at least
CC 40% relative solvent accessibility. The novel CryIIIA proteins have an
CC increased toxicity to Coleopteran insects, e.g. Colorado potato beetle,
CC and can be used to combat, or improve plant resistance towards insects.
CC Specifically, the toxicity of the present sequence towards insects.
CC virgifera virgifera was tested. The ECSO value (concentration at which
CC 10% feeding inhibition is observed) of the present protein was found to
CC be 0.51 microgram per millilitre, compared to 0.71 microgram per
CC millilitre for the wild type CryIIIA protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cryIIIA gene; corn rootworm toxicity; CryIIIA protein;

CC Novel CryIIIA proteins AAM34811-41 were produced by alanine scanning CC mutagenesis of domain II of the CryIIIA protein of Bacillus CC thuriengensis. All the positions changed to alanine in these proteins CC are located in some of the solvent exposed loops and beta-strands CC directed towards or located at the molecular apex. The substituted amino CC acids have a relative solvent accessibility of at least 40%, or are a CC maximum distance of 3 amino acids away from an amino acid having at least CC 40% relative solvent accessibility. The novel CryIIIA proteins have an CC increased toxicity to Coleopteran insects, e.g. Colorado potato beetle, CC and can be used to combat, or improve plant resistance towards insects. CC Specifically, the toxicity of the present sequence towards Diabrotica CC virgifera virgifera was tested. The EC50 value (concentration at which CC 10% feeding inhibition is observed) of the present protein was found to be 1.65 microgram per millilitre, compared to 0.95 microgram per CC mote: this sequence does not appear in the specification; it was created of information and appear in the specification; it was created content information and appear in the specification; it was created content information and appear in the specification; it was created contents information and appear in the specification; it was created contents information and appear in the specification; it was created contents to the contents and appear in the specification; it was created contents to the contents and appear in the specification; it was created contents to the contents and appear in the specification; it was created contents to the contents and appear in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Modified Bacillus thuringiensis CryIII proteins - with toxicity against insect pests, particularly Coleopteran e.g. corn rootworm and Colorado potato beetle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 MNPNNRSEHDTIKTTENNEVPTNHVQYPLAETPNPTLEDLNYKEFLRMTADNNTEALDSS 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8
Novel CryIIIA proteins AAW34811-41 were produced by alanine scanning mutagenesis of domain II of the CryIIIA protein of Bacillus thurlengensis. All the positions changed to alanine in these proteins are located in some of the solvent exposed loops and beta-strands directed towards or located at the molecular apex. The substituted amino acids have a relative solvent accessibility of at least 40%, or are a maximum distance of 3 amino acids away from an amino acid having at least 40% relative solvent accessibility. The novel CryIIIA proteins have an increased toxicity to Coleopteran insects, e.g. Colorado potato beetle, and can be used to combat, or improve plant resistance towards insects.
                                                                                                                                                                                                                                                                                                                                                    Modified Bacillus thuringiensis CryIII proteins - with increased toxicity against insect pests, particularly Coleopteran insects, e.g. corn rootworm and Colorado potato beetle

The ECSO value (concentration at which 50% feeding inhibition is observed) of the present protein was found to be >256 microgram per milliliture, compared to 3.82 microgram per milliliture for the wild type CryIIIA protein. This mutant protein is recognised as a "down mutant" for Diabrotica virgifera virgifera. The toxicity of the mutant protein for this Diabrotica pest was significantly below the toxicity of the native CryIIIA protein. note: this sequence does not appear in the specification; it was created to the content of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    using information provided.

                                                                                                                                                                                                                                                             δ
                                                                                                                                                                                                                                                                                                                                                                Novel CryIIA proteins AAW34811-41 were produced by alanine scanning CC mutagenesis of domain II of the CryIIIA protein of Bacillus thuriengensis. All the positions changed to alanine in these proteins are located in some of the solvent exposed loops and beta-strands directed towards or located at the molecular apex. The substituted amino acids have a relative solvent accessibility of at least 40%, or are a maximum distance of 3 amino acids away from an amino acid having at least 40% relative solvent accessibility. The novel CryIIIA proteins have an increased toxicity to Coleopteran insects, e.g. Colorado potato beetle, and can be used to combat, or improve plant resistance towards insects. Specifically, the toxicity of the present sequence towards Diabrotica virgifera was tested. The ECSO value (concentration at which 50% feeding inhibition is observed) of the present protein was found to be 2.40 microgram per millilitre, compared to 3.82 microgram per millilitre for the wild type CryIIIA protein.
                                                                                                                                                                                                                                                                                               Query Match

All the positions changed to alanine in these proteins care located in some of the solvent exposed loops and beta-strands directed towards or located at the molecular apex. The substituted amino acids have a relative solvent accessibility of at least 40%, or are a maximum distance of 3 amino acids away from an amino acid having at least 40% relative solvent accessibility. The novel CryIIIA proteins have an increased toxicity to Coleopteran insects, e.g. Colorado potato beetle, and can be used to combat, or improve plant resistance towards insects. Specifically, the toxicity of the present sequence towards Diabrotica virgifera virgifera was tested, and the present mutant protein was concluded to be a "down mutant" for Diabrotica virgifera virgifera. The coxicity of the mutant protein for this Diabrotica pest was significantly below the toxicity of the native CryIIIA protein. The intermediation provided in the specification; it was created another information convided.

All the positions changed to alanine in these proteins cc directed towards or located at the molecular apex. The substituted amino cald shave a relative solvent accessibility of at least 40%, or are a cc maximum distance of 3 amino acids away from an amino acid having at least company and the solvent accessibility. The novel CTYIIIA proteins have an cc and can be used to combat, or improve plant resistance towards insects. Specifically, the toxicity of the present sequence towards insects. Cc virgifera virgifera was tested, and the present mutant protein was cc toxicity of the mutant protein for biabrotica virgifera. The cc significantly below the toxicity of the native CTYIIIA protein. Cc significantly below the toxicity of the native CTYIIIA protein. Cc significantly below the toxicity of the native CTYIIIA protein. Cc significantly sequence does not appear in the specification; it was created content information provided.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC Novel CryIIIA proteins AAW34811-41 were produced by alanine scanning CC mutagenesis of domain II of the CryIIIA protein of Bacillus CC thuriengensis. All the positions changed to alanine in these proteins CC are located in some of the solvent exposed loops and beta-strands CC directed towards or located at the molecular apex. The substituted amino CC acids have a relative solvent accessibility of at least 40%, or are a CC maximum distance of 3 amino acids away from an amino acid having at least CC increased toxicity to Coleopteran insects, e.g. Colorado potato beetle, CC and can be used to combat, or improve plant resistance towards biabrotica and can be used to combat, or improve plant resistance towards laborotica CC virgifera virgifera was tested, and the present mutant protein was CC found to be a "down mutant" for Diabrotica virgifera virgifera. The CC vicity of the mutant protein for this Diabrotica protein. CC note: this sequence does not appear in the specification; it was created constant information norwided.
